## UCx - Dial 0 for Operator

Create a Misc. Application.

Give it a Description, something like Operator.

Set the Feature code to be 0 (that is a zero)

Set the feature status to Enabled.

Set the Destination to be the extension of the person that you want as the Operator.  
If you have more than one person acting as the operator, use a Ring Group or a Queue.

Simple, clean and easy and of course 'No License Required' other than for the extensions used.
